In case you haven't noticed, we're on the wallflower-Christmas-garland path! The baby is due in 5 weeks. We're right on track. Our heart rate patterns are back to normal. I'm getting regular contractions, but they're not terrible. I've got plenty of blood to donate. I'm sure glad we're not on the losing end of that rivalry! Many computers have various modes of operation and graphics rendering modes to optimize power and performance. For example, a computer can be operable in a power-save mode or power-save graphics mode (PSG mode) during times when a user is not using the computer. For example, a user can turn the computer on to perform essential tasks such as accessing email, and then turn the computer off and set it to the PSG mode when the user is done accessing the email. The PSG mode may allow the computer to power off various devices such as the display, the hard drive and disk drive, and other components to save power. In PSG mode, the ce6e30c18e

Net Use Q: How do I add a star (*) to a string in Java? I want to add a * to the end of a string. String filePath = "C:\Users\ewuser\Desktop\ewuser.txt"; String name = filePath.substring(filePath.lastIndexOf("\") + 1); String star = filePath.substring(filePath.lastIndexOf("\") + 1).concat(name).concat(".txt"); System.out.println("The star is "+star); I get an error here: System.out.println("The star is "+star); How can I write my program in a correct way to add a * to the end of my string? Thanks. A: In Java, concatenation is done with + operator. You can concatenate strings with. or + in java. In your case, replace this: String star = filePath.substring(filePath.lastIndexOf("\") + 1) .concat(name) .concat(".txt"); with this: String star = filePath.substring(filePath.lastIndexOf("\") + 1) + name + ".txt"; A: The error is not that you get an error with the + operator, but with the.concat(...) part. Since you use it before concat(...) the concat returns a new String, which is why you get an error when you print out the new string. Use the.concat(...) without an argument (as it will append to the string given as the first argument). File file = new File("C:\Users\ewuser\Desktop\ewuser.
